

CLAIMS:

1. An oral phototherapy applicator comprising
a body sized and shaped so as to fit at least partially in a user's mouth, and
at least one radiation emitter coupled to the body to irradiate a portion of the oral cavity
with phototherapeutic radiation in at least two separate spectral bands.
2. The apparatus of claim 1 wherein the emitter further comprises at least one source of
radiation having wavelength components in at least two separate spectral bands.
3. The apparatus of claim 1 wherein the emitter further comprises at least two sources of
radiation emitting different spectral bands of radiation.
4. The apparatus of claim 1 wherein the emitter further comprises at least one radiation
source selected from the group of light-emitting diodes, superluminescent diodes, laser diodes,
vertical cavity surface emitting lasers, fiber lasers, fluorescent solid-state sources, and lamps.
5. The apparatus of claim 1 wherein the apparatus further comprises an optical filter for
selecting a spectral band of radiation for use in phototherapy.
6. The apparatus of claim 1 wherein the apparatus further comprises a plurality of optical
filters for selecting a plurality of spectral bands of radiation for use in phototherapy.
7. The apparatus of claim 1 wherein the spectral bands overlap.
8. The apparatus of claim 1 wherein the spectral bands do not overlap.
9. The apparatus of claim 1 wherein the apparatus further comprises an optical element for
directing radiation in different directions.

10. The apparatus of claim 9 wherein the apparatus is configured to direct radiation to at least one portion of the oral cavity selected from the group of a tooth, cheek, tongue, palate, throat and facial tissue, lymphatic tissue, blood, gland, follicle, collagen and pigmentation.
11. The apparatus of claim 1 wherein the apparatus further comprises a plurality of bristles.
12. The apparatus of claim 11 wherein the bristles are substantially transparent to phototherapeutic radiation within at least one wavelength range.
13. The apparatus of claim 11 wherein the bristles are coupled to the emitter to receive and propagate radiation therefrom.
14. The apparatus of claim 11 wherein the apparatus further comprise a scattering agent to diffuse the radiation.
15. The apparatus of claim 11 wherein the bristles are at least partially coated with a reflective material.
16. The apparatus of claim 11 wherein the bristles are shaped to control light distribution.
17. The apparatus of claim 16 wherein the bristles have at least one shape selected from the group of conical, tapered, curved and spiral shapes.
18. The apparatus of claim 11 wherein the bristles are shaped to transmit radiation.
19. The apparatus of claim 18 wherein the bristles have at least one shape selected from the group of conical, tapered, curved and spiral shapes.
20. The apparatus of claim 11 wherein the bristles further comprise at least one element selected from the group of fluorescent, luminescent or lasing elements.

21. The apparatus of claim 11 wherein the bristles are incorporated into a brush head, which is removable and replaceable.
22. The apparatus of claim 11 wherein the bristles are optically transmissive and coupled to a radiation emitter to receive and transmit radiation.
23. The apparatus of claim 21 wherein the light refractive characteristics of the optically transmissive bristles are selected to inhibit light transmission to the oral cavity in the absence of contact between the bristle and a surface of the teeth or cavity.
24. The apparatus of claim 1 wherein the apparatus further comprises a motion sensor and controller which controls the radiation emitter based on signals from the motion sensor.
25. The apparatus of claim 1 wherein the apparatus further comprises a contact sensor and controller which controls the radiation emitter based on signals from the contact sensor.
26. The apparatus of claim 1 wherein the apparatus further comprises an diagnostic sensor and controller which controls the radiation emitter based on signals from the diagnostic sensor.
27. The apparatus of claim 1 wherein the apparatus further comprises at least one thermally conductive element for extracting heat from the emitter.
28. The apparatus of claim 27 wherein the thermally conductive element comprises a fluid heat transfer medium.
29. The apparatus of claim 27 wherein the apparatus further comprises a handle that serves as a heat sink.
30. The apparatus of claim 27 wherein the thermally conductive element comprises a phase change material.

31. The apparatus of claim 27 wherein the apparatus further comprises a heat transfer element for heating a portion of the oral cavity with waste heat from the apparatus.
32. The apparatus of claim 1 wherein the apparatus further comprises a light diffuser optically coupled to the radiation emitting element to deliver diffuse radiation to the oral cavity.
33. The apparatus of claim 32 wherein diffuser comprises an optically transmissive element with a partially etched cladding.
34. The apparatus of claim 1 wherein the body is sized and shaped so as to fit at least partially in a user's mouth and adapted to conform to the shape of at least a portion of the oral cavity.
35. The apparatus of claim 34 wherein the body is compliant to facilitate conformation to a portion of the oral cavity.
36. The apparatus of claim 34 wherein apparatus further comprises a body in the form of a mouthpiece adapted for positioning between a user's teeth and gums during phototherapy.
37. The apparatus of claim 34 wherein the apparatus further comprises a body adapted for placement in a position covering at least a portion of a user's tongue during phototherapy.
38. The apparatus of claim 1 wherein the body is compliant to facilitate conformation to a portion of the oral cavity.
39. The apparatus of claim 1 wherein apparatus further comprises a body in the form of a mouthpiece adapted for positioning between at least a user's teeth and gums during phototherapy.
40. The apparatus of claim 1 wherein the apparatus further comprises a body adapted for placement in a position covering at least a portion of a user's tongue during phototherapy.

41. The apparatus of claim 1 wherein the apparatus further comprises a body adapted for placement in a fixed position relative to the oral cavity during phototherapy.
42. The apparatus of claim 1 wherein the apparatus is configured such that, upon disposition of the applicator within the mouth, radiation from the emitter can penetrate the mucosal lining of the oral cavity and deliver phototherapeutic energy to a region of facial tissue.
43. The apparatus of claim 1 wherein the apparatus further comprises an ultrasound generator for delivering acoustic energy to a target tissue site.
44. The apparatus of claim 1 wherein the apparatus further comprises a vibrating element for applying intermittent pressure to a target tissue site.
45. The apparatus of claim 1 wherein the apparatus further comprises a drug delivery port.
46. The apparatus of claim 1 wherein the apparatus further comprises an energy reflector for redirecting phototherapeutic radiation towards a target tissue site.
